Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Moreh et al., (U.S. Publication No. 2003/0046391 and Moreh hereinafter).

Regarding claims 1 and 9-10, Moreh discloses a method for providing security services in a clustered data processing environment, said method comprising the steps of:

providing an access program layer on at least two data processing nodes of said clustered environment, said layer presenting a consistent security interface, from at least two of said nodes to two at least two types of security program module which implement a security service on different nodes within said cluster, to applications which run on said nodes and which access a same one of said at least two types of security program modules on different nodes, through said consistent interface (Page 3, Par. 0038-0047 and Page 6, Par. 0082-0087); and

providing at least one adapter module for each security program module, wherein said at least one adapter module maps parameters of said security service to said security interface, whereby applications running on different nodes do not require modification to use different security program modules (Page 3, Par. 0048-0054).

Regarding claims 2-4, Moreh discloses the method of claim 1 in which there is a plurality of more than two of said data processing nodes (i.e., server and client)(Page 3, Par. 0038-0041).

Regarding claim 5, Moreh discloses the method of claim 1 in which said access program layer includes authentication and authorization services through said security interface (Page 3, Par. 0042-0052).

Regarding claims 6-7, Moreh discloses the method of claim 1 in which said access program layer includes access control services through said security interface (i.e., digital certificate including credentials)(Page 7, Par. 0096-0107).

Regarding claim 8, Moreh discloses the method of claim 1 in which said access program layer loads security program modules identified through said security interface (Page 4, Par. 0059-0066).
